

SōN™ ACOUSTICS

CONTROL THE NOISE!

SōN Acoustics “helped create the right ambience in the dining room”
Restaurant owner Rajae Mazbar

“With SōN Acoustics, my customers can finally dine comfortably!”
Restaurant owner Samy Genet

Are your patrons complaining about noise levels? Did you get a bad grade on that important review because your restaurant is noisy? We can help you with acoustic solutions to take control of your sound quality.

Restaurant patrons have become increasingly conscious of noise comfort. They won't return to an establishment if they can't hold a conversation with their dining partner. In fact, restaurant reviews often include a mention of noise levels. Everyone and everything in the dining room contributes to the problem: people talking, working and cooking, and music playing. Layers of noise build up to reach deafening sound levels. If the walls of the room are not part of the solution, they are part of the problem!

What is the solution? Judicious use of sound absorbing materials, dressed in esthetically integrated finishes. Media Specialty Resources (MSR) will determine the best layout for your needs, and provide you with the most economical and unobtrusive design. Panel shapes can be customized to any design, and installation of the materials is easy and fast.

Create the right atmosphere for your restaurant; call MSR about SōN acoustics today!
